ASSIGNMENT 5: Final Midterm Portfolio

Cole R. Caress

8 March 2021

Professor Russell Pensyl

Northeastern University: ARTF2223

Task: Students were asked to come up with a menu layout and portfolio design to present their work throughout the semester this far. Using both Adobe XD and Html/CSS, students were tasked with creating an html link to present. The goal was to cerate a menu that was easily accessible in terms of being able to access the work for grading purposes.
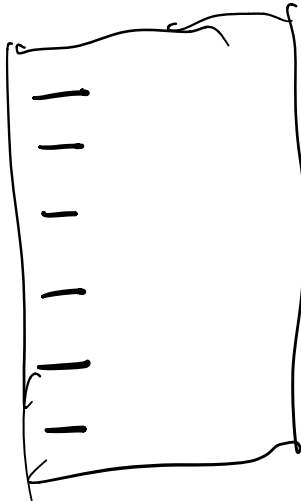

Consideration will be given to how well the layout is organized in terms of the menu structure. This should consider the idea of both short term and long term memory. Since experience with HTML and CSS is limited, keep the design and layout very simple and improve it as skills continue to increase and get better.

I really struggled to find a good theme in my work. Before transferring to Northeastern I studied Interior Design. I thought about my work and the work I have done beyond the classroom, and marble is by far my favorite material to work with and incorporate. Instead of using marble as my theme, I decided to pick something that is similar in look but different in meaning and that is cracked concrete. I am still working on progressing/improving my theme and design while incorporating both my school work and my passions.
